TITLE: Improved Process for Obtaining Alcohols by the  
Oxo-synthesis Method With Suspended Catalyst

PERIODICAL: Khimiya i tekhnologiya topliv i masel, 1961,  
No. 8, pp. 19 - 24

TEXT: The authors mention briefly the drawbacks of the existing technological schemes for obtaining alcohols by oxo-synthesis. The main drawbacks of the scheme with suspended catalyst are the erosion of the throttle elements, the need for paste pumps for transporting the catalyst (which is in suspension in the liquid) and the existence of a filtering section which work intermittently. Periodic switching between gas and liquid streams, a complicated automatic control and the decomposition of the cobalt carbonyl (decobaltisation) are the chief drawbacks of the other two schemes. The present paper deals with improving the scheme with suspended catalyst. The tests were carried out on a model and in a pilot plant. In the present process the synthesis occurs

Card 174

S/065/61/000/008/004/009

E030/E335

Improved Process ....

in the liquid phase and therefore a solvent is used which is isobutyl alcohol at the start of the reaction, changing to the final product as the reaction proceeds. In the laboratory tests a propane-propylene feedstock with 74 to 85% propylene was used, the ratio of raw material to solvent being nearly 1:2 and that of CO to hydrogen 1:1.2. In the pilot plant, synthesis gas was used as feed, with the ratio of hydrogen to carbon monoxide varying between 0.5:1 to 7.5:1, the other parameters being nearly the same as those in the laboratory tests. In order to eliminate the deficiency in the filter system, a re-cycle system using a centrifugal separator was introduced. This system (developed in conjunction with NIIKhIMMASH under the direction of Senior Engineer G.K.Ivanova) enables the filters to work for long periods without cleansing and, by returning the catalyst-rich fraction to the reactor, diminishes the quantity of product going for decobaltisation, filtering, hydrogenation and rectification. Thus, the process of obtaining butyl alcohols is carried out in three stages: 1) production of cobalt carbonyls and hydroformylation of propylene; 2) decomposition of cobalt carbonyls

Card 2/4

S/065/61/000/008/004/009  
E030/E335

Improved Process ....

(decobaltization) and 3) hydrogenation of aldehydes and alcohols. In the previous two-stage process only alcohols were obtained as the final product; in the present three-stage one aldehydes also are obtained. It has been shown that by hydroformylation at 300 atm. and 125 °C the content of n-aldehydes in the final product increases. It has also been found that at temperatures of 110 to 140 °C and pressures of 25 to 100 atm the catalyst decomposes completely. At 135 °C and 300 atm. propylene converts to n-aldehydes (63%), iso-aldehydes (21%), high aldehydes (11.4%) and by-products (4%), the ratio of n- to iso-aldehydes being 3:1. With decreasing pressures this ratio decreases, being 2.2:1 at 250 atm. and 1.6:1 at 200 atm. During the oxo-reaction carried out in the pilot plant at temperatures between 135 and 160 °C, a pressure of synthesis gas of 180-200 atm., content of catalyst of 1-2% and contact time 45 min., a product with a ratio of n- to iso-aldehydes of approximately 2:1 was obtained. This product hydrogenated in a mixture of butyl alcohols in the same ratio. G.N. Klinova, A.D. Yerofeyeva, N.M. Malygina, A.I. Khokhlov, A.I. Zaytseva, T.V. Yelisova and A.I. Busygina

TITLE: Effect of methane and its admixtures upon ammonia  
synthesis

SOURCE: Khimicheskaya promyshlennost', no. 5, 1963, 24-25

TOPIC TAGS: methane, ammonia, ammonia synthesis

ABSTRACT: Authors studied the effect of methane and some of its admixtures which are contained in a nitrogen-hydrogen mixture upon ammonia synthesis. Natural gas from the Saratov and Dashansk beds was tested. The effect of methane in the gases from each of these fields was studied with one and the same catalyst in three series of tests. The ammonia yield in a pure nitrogen-hydrogen mixture of stoichiometric composition was determined in the first series. The same mixture with an admixture of methane was analyzed in the second series. The pure mixture of stoichiometric  
Card 1/2

L 17438-63

ACCESSION NR :AP 3004299

composition was tested again in the third series. The effect of pure methane was tested at a pressure of 300 atm., temperatures of 450, 475 and 500C, space velocities of 15,000-90,000 hour<sup>-1</sup> and concentrations of 5, 16 and 30% by volume. Authors found that even a maximum methane content (30% by volume) does not have a negative effect upon the performance of the ammonia catalyst (ammonia yield in first and third series of tests was identical). When methane is added to the nitrogen-hydrogen mixture, the ammonia yield is noticeably reduced. The assumption that this is caused by a reduction in the mixture's partial pressure on account of methane rarefaction was not justified. Authors conclude that presence of methane inhibits ammonia synthesis. Orig. art. has: 3 tables.

TITLE: Elastic backward scattering of  $\pi$ -mesons by neutrons in the 1.4-4.0 Bev/s pulse range

SOURCE: Zhurnal eksperimental'noy i teoreticheskoy fiziki. Pis'ma v redaktsiyu.  
Prilozheniya, v. 2, no. 2, 1983, 90-94

TOPIC TAGS: pi meson, particle scatter, neutron scattering

ABSTRACT: The elastic backward scattering reaction  $\pi^+ + n \rightarrow \pi^+ + n$  is studied in the 1.38-4.05 Bev/s pulse range. 1700 events of this reaction were selected with a pion scattering angle of  $>90^\circ$ . The solid angles for these events were measured (accuracy of measurement in the horizontal plane was  $1^\circ$  and in the vertical plane  $<1^\circ$ ). The results are given in graphic and tabular form. Orig. art. has: 3 figures, 1 table.

TITLE: Changes in several physiological indices of the organism in a gas medium formed by polymer decomposition [Paper presented at the Conference on Problems of Space Medicine held in Moscow from 24 to 27 May 1966]

SOURCE: Konferentsiya po problemam kosmicheskoy meditsiny, 1966. Problemy kosmicheskoy meditsiny. (Problems of space medicine); materialy konferentsii, Moscow, 1966, 66-68

TOPIC TAGS: toxicology, polymer degradation, central nervous system, liver, closed ecological system, air pollution

ABSTRACT: The combined effect on animal organisms of the chemical substances formed by the degradation of some 14 polymers at temperatures in excess of 40°C was studied in a 25-day experiment.

Analysis of air from the chamber containing 80 laboratory animals showed the following: acrylonitrile,  $2.8 \pm 1.7 \text{ mg/m}^3$ ; aldehydes,  $0.02 \pm 0.01 \text{ mg/m}^3$ ; ammonia,  $4.6 \pm 1.3 \text{ mg/m}^3$ ; acetone  $1.07 \pm 0.6 \text{ mg/m}^3$ ; dibutylphthalate,  $3.7 \pm 0.4 \text{ mg/m}^3$ ; sulphur dioxide,  $1.77 \pm 0.8 \text{ mg/m}^3$ ; carbon monoxide,

Card 1/3

L 11374-67

ACC NR: AT6036499

19.1 ± 1.3 mg/m<sup>3</sup>; hydrocarbons, 600 ± 218 mg/m<sup>3</sup>; hydrogen chloride, 2.46 ± 1.2 mg/m<sup>3</sup>; epichlorhydrine, 0.33 ± 0.08 mg/m<sup>3</sup>; ethyl acetate, 1.61 ± 0.6 mg/m<sup>3</sup>; and ethylene glycol, 0.7 ± 0.4 mg/m<sup>3</sup>.

Carbon dioxide content varied up to a maximum of 1%, oxygen content was 21%, and the relative humidity varied from 60 to 80%.

Blood studies conducted on the animals included erythrocyte count, leukocyte count, reticulocyte count, and hemoglobin determinations, as well as duration of bleeding, rate of coagulation, prothrombin time, thrombocyte count, and blood viscosity. Ability to synthesize hippuric from benzoic acid was taken as an index of the functional state of the liver.

In addition, observations were made of behavior and general conditions of the animals, dynamics of weight changes, tolerance to physical stress, and oxygen requirement. Relative weights of internal organs were determined.

The experimental animals were observed preceding, during, and for 14 days after the experiment.

Prolonged continuous exposure of the animals to the chemical substances liberated by the polymers produced nonspecific functional shifts.

Card 2/3

L 11374-67  
ACC NR: AT6036499

CNS effects included subcortical irritation and weakening of cortical subordination function. This resulted in intersection of extensor and flexor motor chronaxy curves, lowered susceptibility to brain stem hexanol narcosis, and increased tolerance to physical stress.

Peripheral blood studies showed increased erythrocyte, hemoglobin, and thrombocyte counts.

These CNS and peripheral blood shifts were unstable and nonspecific, and should be regarded as an adaptation reaction of the organism to the presence of gases released by polymer materials. This interpretation is supported by full restoration of the altered functions and indices to the initial state within 14 days after the end of the experiment.

It is concluded that the investigated polymers can be used in space cabins so long as the gases they liberate are scrubbed from the cabin air before they attain the maximum permissible concentration for small closed compartments.

Title : The Control of Pests of Vegetable Cultures.

Orig Pub : Sots.s.-kh. Uzbekistana, 1957, No 5, 69-71.

Abstract : A mixture of DDT and hexachlorocyclohexane (HCCH) in equal amounts had a prolonged and high effect against a complex of gnawing and sucking pests of vegetable cultures. Dusting of cabbage with HCCH against aphids produces great economical results. Even a three-times treatment of cabbage with a 6% HCCH dust (24 kg/hectare) did not affect the odor or taste of the cabbages.

A. I.; Tech. Ed.: Kosheleva, S. M.; Map. Ed.: Mal' chevskiy, G. N.

PURPOSE: The book is intended for readers interested in the Soviet Arctic.

COVERAGE: The present volume, the second of a series of three, is a collection of 27 articles by various authors presenting an historical account of the exploration and economic development of the Soviet North. A small part of the book is devoted to Arctic areas beyond the confines of the Soviet Union. The aim of the book is to contribute to an understanding of the physical geography, cartography, ethnography, and economy of the Soviet North through a historical survey of these factors. A large number of authors explorers, scientists, travellers, pilots, navigators, etc. are cited.

## PERSONAL:

Electrotechnics, 1960, No. 7, p. 94

TEXT. This is a brief biography of Vladimir Aleksandrovich Prilepsinov, born at the village of Kolodino, Moscow Oblast, on June 10, 1900. In 1924 he finished his studies at the Electrotechnical faculty of the MFTU (Department of Electrical Engineering) of the MFTU), later on at the Bolshevik powerplants-economics institute (Bolshoi Institute of Industry and Economics) and the Vysokii voltage engineering bureau (VNIIT) (Higher Pedagogical Course at the MFTU). In 1930, he graduated for the degree of Candidate, became a Doctor in 1939, and a Professor in 1946.

000/000

Professor V. A. Prilepsinov, On His 60th Birthday and the 35th Anniversary of His Scientific-Pedagogical and Engineering Activity

Born in 1900, in 1924, from time 1921 he worked for 20 years at the Soviet submarine (Moskva) and as chief engineer between 1941 and 1945. From 1945 he worked as chief engineer at the Central Cable Laboratory MFTU (Central Cable Laboratory MFTU) and as a deputy director for the scientific section of the management and technological institute (Scientific Research Institute of the Cable Industry). From 1949 on, he has been working as a department chief at the MFTU. He cooperated in the rationalization of power cable construction for 10 years, conducted the production of automobile cables, and cables with glass wool, copper, and enamel insulation. For 25 years he has been writing at the MFTU. At the MFTU, he is supervising the work of post-graduate students. He wrote many books, handbooks on cable engineering and more than 100 articles. For 15 years, he was the responsible editor of the scientific-technical periodical of cable engineering (edition of the "Mashgiz" Bureau and the MFTU) conducted for 10 years by the author's teacher, Naumov.

Sidorov, L. F.

TITLE:

On the Problem of the Ancient Glaciation of the Pamir (K  
voprosu o drevnem oledenenii Pamira)

PERIODICAL:

Doklady Akademii nauk SSSR, 1959, Vol 127, Nr 4, pp 860-861  
(USSR)

ABSTRACT:

The determinations of the ancient glaciation of the Pamir so far made were not sufficiently accurate. References 2,4,5,9-11 indicate that there were at least 2 glacial periods in the Pamir, the first being more extensive. References 1,6-8, indicate that the existence of one glacial period only can be determined with accuracy. The diversity of assumptions makes the solution of many problems very difficult and sometimes leads to wrong paleographic constructions. In the course of several years' investigations the author frequently came across signs of two glacial periods in the Pamir. He mentions several examples and analyzes the climatic details of the Pamir in connection with it (the influence of monsoon, the "dropping" of air in the Pamir valleys). If the importance of the more ancient glaciations is ignored and the activity of the glaciers

Card 1/2

SOV/20-127-4-38/60

On the Problem of the Ancient Glaciation of the Pamir

of the last glacial period overestimated an incorrect evaluation of the importance of the more ancient glaciations in forming the reliefs of the main valleys of the Pamir may be brought about (Ref 1). Also, the explanation of the developmental history of the whole natural Pamir complex becomes very complicated. Co-workers of the biological station of the institute mentioned in the Association participated in the investigation. There are 12 Soviet references.

TITLE: Vapor pressure of zirconium tetrafluoride

SOURCE: Zhurnal neorganicheskoy khimii, v. 8, no. 6, 1963, 1520-1522

TOPIC TAGS: vapor pressure, zirconium tetrafluoride, mass spectrometry, heat of sublimation

ABSTRACT: Vapor pressure of  $ZrF_4$  was measured by mass spectrometry. In the temperature interval 681-913K,  $\lg p = 13.5571 - 12430/T$ . Value obtained for heat of sublimation agrees with that obtained by K. A. Sense, Snyder and Gilbert (J. phys. chem., 58, 995, 1954); also, Sense and Snyder, Glegg. (U.S. atomic energy comp. AECD-3708). However, vapor pressure value obtained was higher than that in above reference, and lower than that of S. Kantor, Newton, Crimes and Blackenship (J. phys. chem. 62, 96, 1958). Orig. art. has: 2 tables, 2 figures, 5 equations.

TITLE: Mass spectrometric study of the thermodynamic properties of the NaF-ZrF<sub>4</sub> system (Section 1)

SOURCE: Zhurnal fiz.khim, v. 38, no. 1, 1964, 146-150

TOPIC TAGS: complex fluorides, sodium fluoride, zirconium fluoride, fluoride mass spectrometry, NaF-ZrF<sub>4</sub> system

ABSTRACT: This work was prompted by earlier indications that complex fluorides of alkali and polyvalent metals exist in their gas phases. Inconsistency of the vapor pressure method with other methods induced the authors to undertake a mass spectrometric investigation with the aid of a MS-4 instrument. As a result of observations and extensive mathematical derivations, curves of ionic currents were plotted and equations derived for the dependence of NaF monomer, dimer and trimer vapor pressure on temperature. In saturated vapor of the NaF-ZrF<sub>4</sub> system at 877°C, a NaZrF<sub>5</sub> molecule was found which upon ionization

TITLE:  $\pi^-$  meson-neutron elastic backward scattering at 1.4-4.0 bev/c

SOURCE: USSR. Gosudarstvennyy komitet po ispol'zovaniyu atomnoy energii. Institut  
teoreticheskoy i eksperimental'noy fiziki. Doklady, no. 350, 1955. Pi sup minus-  
meson-neutron elastic backward scattering at 1.4-4.0 Bev/c, 1-12

TOPIC TAGS: pion scattering, neutron scattering, elastic scattering, scattering  
cross section, angular distribution, spark chamber

ABSTRACT: The authors study the elastic backward scattering reaction

$\pi^- + N \rightarrow \pi^- + N$   
in the 1.38-4.05 bev/c range. A spark chamber was used with photographic and neu-  
tron counter registration. The experimental installation was highly efficient in

Card 1/2

L 30993-66

ACC NR: AT6002498

recording  $\gamma$ -quantum from  $\pi^0$ -decays, and the admixture of inelastic events

in the 1700 cases of the elastic backward scattering reactions which were selected for study was no more than 2%. The solid angles for these cases were measured and the absolute cross sections were determined. Tables are given showing the cross section  $\bar{\sigma}_n = \bar{\sigma}_{D_2O} - \bar{\sigma}_{H_2O}$  and  $R = \bar{\sigma}_{H_2O}/\bar{\sigma}_{D_2O}$  as functions of energy. The total error

in calculation of these cross sections due to necessary corrections for pion-pion and pion-neutron scattering in the ambient medium, electronic efficiency, beam composition and the shielding effect of nucleons in the deuterium was 25%. Data for  $\sigma_n$  and  $\langle \sigma_n \rangle$  as functions of energy show some irregularity in the 2-3 bev region

which may be due to resonance. Measurements of angular distribution for pion-neutron scattering show a minimum in the 162-180° region. The momentum transfer function is used as a basis for calculating the width of this minimum. A comparison of the experimental data obtained in this paper with those in the literature shows that the cross section  $d\sigma/dQ$  is approximately inversely proportional to energy when the momentum transfer is constant. Orig. art. has: 4 figures, 2 tables.

TITLE: Use of a leukocyte culture to differentiate African plague virus from swine plague virus

SOURCE: Ref. zh. Biologiya, Abs. 20B145

REF SOURCE: Dokl. VASKhNIL, no. 11, 1964, 36-41

TOPIC TAGS: virus, virus disease, blood, African swine fever

ABSTRACT: Swine African plague virus strain L causes hemadsorption of leukocytes with subsequent lysis of infected cells. Swine African plague virus in a leukocyte culture multiplies with passage and accelerates the lysis of affected cells. Following 15 passages the virus did not lose its virulence for swine. Swine plague virus of the Dorset strain and lapinized strains K and VIEV do not cause hemadsorption and cytolysis of cells in a leukocyte culture, but certain culture changes (more marked granulation) were observed. The reaction test of Melmkvist and Hay is recommended for differentiation of swine African plague virus and swine plague virus. The effect of other types of viruses, causative agents of infectious diseases in swine, on leukocyte
